

CHEMICAL ABSORBENTS

Chemical absorbents are for use on aggressive and non-aggressive liquids such as acids, caustics, oil coolants, solvents, water and solutions.

Fast acting with high absorbency rates, designated yellow in colour, they are ideal for larger chemical spills down to bench top laboratory situations.

CONFINE AND ABSORB LIQUIDS SUCH AS ACID, CAUSTICS, OIL, COOLANTS, SOLVENTS, WATER AND SOLUTIONS

Rolls and pads are specially treated to quickly absorb most liquids. The yellow colour assists with the safe clean up of chemical spills.

Rolls are great for covering large areas. Cushions have a large surface area and the filler absorbs large amounts of liquid quickly.

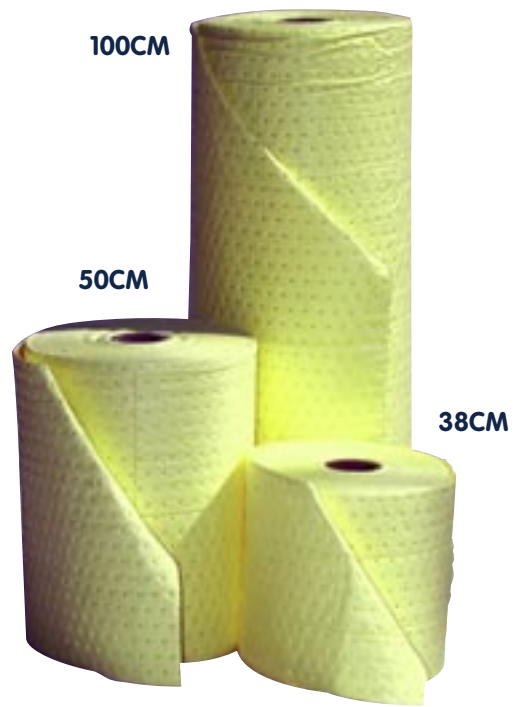

Once the spill has been contained it is important to get the liquid off the floor quickly.
